

COMICCRAFT – USER MANUAL

1. Introduction

ComicCraft is an AI-based web application that helps users create personalized comic stories from simple story ideas.

The application uses Generative AI to create story content and comic panels and provides a final comic output that can be exported as a PDF.

2. Purpose of the Application

ComicCraft is designed to make comic creation easier by automating the story generation process.

The user only needs to provide a story idea. The application processes the idea and generates structured comic content.

3. Main Features

The major features of ComicCraft are:

- Story prompt input
- AI-based story generation
- Comic panel generation
- Scene descriptions
- Captions and narration
- Character dialogue

- Image prompt generation
- Panel image generation
- Comic layout creation
- PDF export

4. Starting the Application

To use ComicCraft:

1. Open the ComicCraft project.
2. Start the required Python environment.
3. Start the FastAPI application.
4. Open the application in a web browser.
5. The ComicCraft home page will be displayed.

5. Entering a Story Prompt

On the home page, the user can enter a story idea in the provided prompt field.

Example:

"A student discovers a mysterious book in the college library."

The prompt should clearly describe the basic story idea.

6. Generating the Comic

After entering the story prompt:

1. Check the entered story idea.
2. Select the Generate option.

3. The application sends the prompt to the backend.
4. The AI processes the story idea.
5. Comic panels are generated.
6. Images are generated for the panels.
7. The completed comic layout is prepared.

7. Viewing Comic Panels

After generation, the user can view the generated comic panels.

Each panel may contain:

- Panel number
- Panel title
- Scene description
- Caption
- Narration
- Dialogue
- Generated image

The panels are displayed in story order.

8. Generating the PDF

After reviewing the generated comic:

1. Select the PDF generation or export option.
2. The application prepares the comic layout.
3. The PDF generation module creates the PDF.
4. The PDF is saved by the application.
5. The user can access the generated PDF.

9. Error Handling

If an error occurs, the application may display an appropriate error message.

Common problems may include:

- Empty story prompt
- Invalid input
- AI service error
- Image generation failure
- Missing image file
- PDF generation failure

The user should check the displayed message and correct the input or configuration when required.

10. User Workflow

The complete user workflow is:

Open ComicCraft

↓

Enter Story Idea

↓

Generate Comic

↓

AI Story Generation

↓

View Comic Panels

↓

Generate Images

↓

Review Comic

↓

Export PDF

11. Important Notes

Users should:

- Enter a clear story prompt.
- Maintain a stable internet connection when AI services are required.
- Ensure the application is correctly configured.
- Keep API credentials private.
- Check the generated comic before exporting the final PDF.

12. Expected Result

After following the user workflow, the user should receive a personalized AI-generated comic containing story content, comic panels, images, and a downloadable PDF output.

13. Conclusion

The ComicCraft User Manual provides simple instructions for using the application.

It explains how to start the application, enter a story idea, generate a comic, view the generated panels, and export the final comic as a PDF.
